GEOZENTRUM HANNOVER

BGR's Geothermal Program for Eastern Africa

Dec. 2016 – Jul. 2019

- **Overall Objective**

Improved technical and institutional capacities, regulatory frameworks and technical information are supporting investment and development of geothermal resources.

- **BMZ** (German Federal Ministry for Economic Cooperation and Development)

→ funding of BGR-activities with € 3.0 Mio (PN 2016.2066.5)

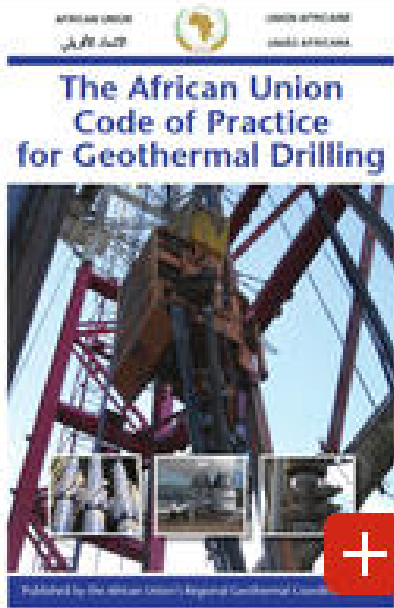

- **BGR** (German Federal Institute for Geosciences and Natural Resources)

→ **Technical Cooperation:**

- (1) **Surface Exploration Studies**
- (2) **Capacity Building / Institutional Support**
- (3) **Awareness / Conferences / Strategy**
- (4) **Supply of Technical Equipment**

- **BGR-Partners** African Union Commission (AUC), and Ministries of Energy, Minerals and Mines, Geological Surveys, and Power Utilities of GRMF-AU Member States.

The AU Code of Practice for Geothermal Drilling

The good practices specified in this code may be applied to a range of circumstances. But it is applicable specifically to geothermal wells.

The code covers the drilling, operation, repair, and abandonment of deep geothermal wells. It includes all subsurface work plus the wellhead up to the top of the master valve.

The code also applies to continuous wireline coring, coiled tubing operations, or other non-typical methods for constructing and maintaining deep geothermal wells.

Free download:

<http://www.grmf-eastafrika.org/application/background-documents>

2014-2015 jointly elaborated by Representatives of Geological Surveys and Ministries from GRMF-Countries, UNEP ARGeo, and International Consultants (CAN | GER | ETH | NZL | USA).

Short Courses on the AU Code of Practice

GDC, Kenya, May 2017
ODDEG, Djibouti, July 2017
Ethiopia, Q2 2018

Thank you.
